

Myer Hill Engineering is hiring a full-time experienced Structural Engineer for our Lancaster PA location.

About Myer Hill Engineering

Myer Hill Engineering has established itself as a reliable and innovative structural engineering provider for the residential and light commercial building market. Our client base consists of architects, designers, builders, and product manufacturers in the eastern Pennsylvania area and beyond. We have extensive experience in custom homes, light commercial buildings, residential and commercial remodel projects, outdoor structures, heavy timber design, post-frame structures, and product development.

Our clients rely on us for more than just structural engineering. We work closely with designers and builders to develop structural framing solutions that are both functional and efficient to build.

Job Summary

The structural engineer will engage with our clients from the office and in the field to understand the project scope and requirements and to deliver practical structural solutions that are clearly presented. As a small engineering firm, collaboration is expected and opportunities are provided for professional growth and development. Position is in Lancaster County, PA with some flexibility for remote work.

Responsibilities

- Develop the overall structural design strategy for both vertical and lateral loads
- Design of structural members and connections including wood, steel, and concrete materials
- Prepare calculations for internal review and for submittal where required
- Complete job site visits as required to assess existing conditions and prepare reports for external review as required
- Redline drawings for review and incorporation of structural information by others
- Prepare structural drawings including foundation plans, floor and roof framing, sections, and details as required
- Attend project meetings to review structural information and coordinate with other design professionals

Qualifications

- Bachelor's Degree in Civil Engineering or Architectural Engineering
- Registered as a Professional Engineer
- Minimum of 5 years of structural engineering experience
- Knowledge and/or experience in residential or commercial construction preferred
- Excellent written and verbal communication skills
- Desire to pursue leadership and entrepreneurial opportunities
- Ability to work independently, master new skills, and develop new areas of expertise
- Experience with engineering software and AutoCAD preferred

Salary and Benefits

- Salary commensurate with experience
- Flexible health care, life insurance, and disability insurance
- Retirement Program with company match
- Professional development
- Profit sharing opportunities
